CERTIFIED ENERGY FIT RATING

Below shows a table of our certified energyFit rating scaled from 1 - 10. We measure the comfort, billing cost and environmental impact of your home. The black dots represents the average home and the white houses represent where your house is rated and will determine exactly how energyFit your home is.

We rated your Comfort a 3 because your home could have more affordable heating upstairs.

We rated your bills a 6 because you have an energy efficient water heater and down stairs heating. To improve your rating you could install roof top solar and more efficient heating upstairs.

We rated your environment a 6 because of your energy efficient water heater and down stairs heater. To improve you could install roof top solar and more efficient heating upstairs.

Just like many others, you too can get your home energyFit !

To get your home completely energyFit, we estimate the loan repayments on your equipment would cost **\$136** a month, and save you **\$558** a month, based on similar jobs in your area. We can look at over 1 million different combinations of air conditioners, water heaters, and solar panel arrangements to find the products and appliances best suited to your home.

We guarantee we can:

- 1) Increase the comfort of your home
- 2) Drastically reduce your bills
- 3) Make it so that your home is producing zero emissions having an extremely positive impact on the environment
